

Profi L - Clip GmbH

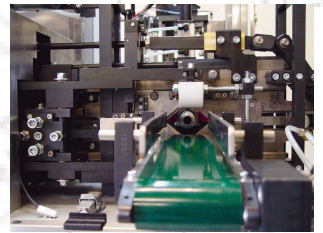

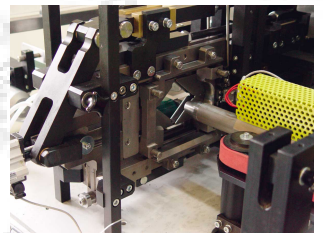

Innovation - Flexibility - Quality - Service

Foundation of our company philosophic

COMPANY HISTORY

The cost- and space-intensive warehousing of cartridges for the bottling of sealing compounds led the company founder Günther Knieriem († 2004) in 1986 to think about alternative solutions. The idea to fill sealing compounds in cheaper and more processing-friendly tubular bags made him develop the first machine of the SKT series in Ladenburg in 1987 under the company name VP-TE Verpackungstechnik. The success proved him right - there was a huge demand for filling machines for tubular bags. At the same time he developed the proven discharge nozzles as well as the ejection pistons for tubular bag guns. It took a long time until the filling automaton reached its standard of today - compact, ergonomic, user-friendly and inexpensive. The company of VP-TE established itself in the world market through innovation and close attention to customers. In 2004, VP-TE became the company of Profil-Clip, customer satisfaction still remains our priority.

WORLD WIDE SALES

We sell our products world wide and also offer the relevant technical support and service.

OUR PRODUCTS

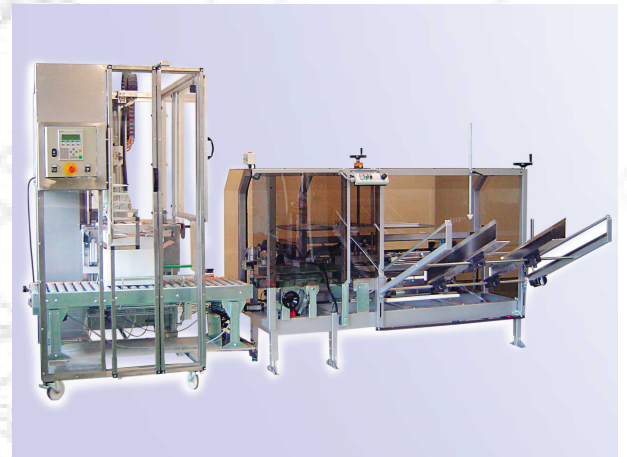

TUBULAR BAG FILLING AUTOMATONS

The SKT series is suitable for all pasty materials such as e.g. adhesives and sealing compounds. These automatons are characterised by their compact and clear layout, their space- and energy-saving design, fully-automated clip production from the wire coil, and integrated dosing unit. Reduction of production costs by not using pre-fabricated clips. All common film types can be processed. Thanks to their modular design, customer-tailored solutions can be implemented.

CASE PACKER

For an automated packaging of tubular bags into packaging units. All common bag sizes can be efficiently packed using quick change systems. There is also the additional option to include nozzles in the packaging.

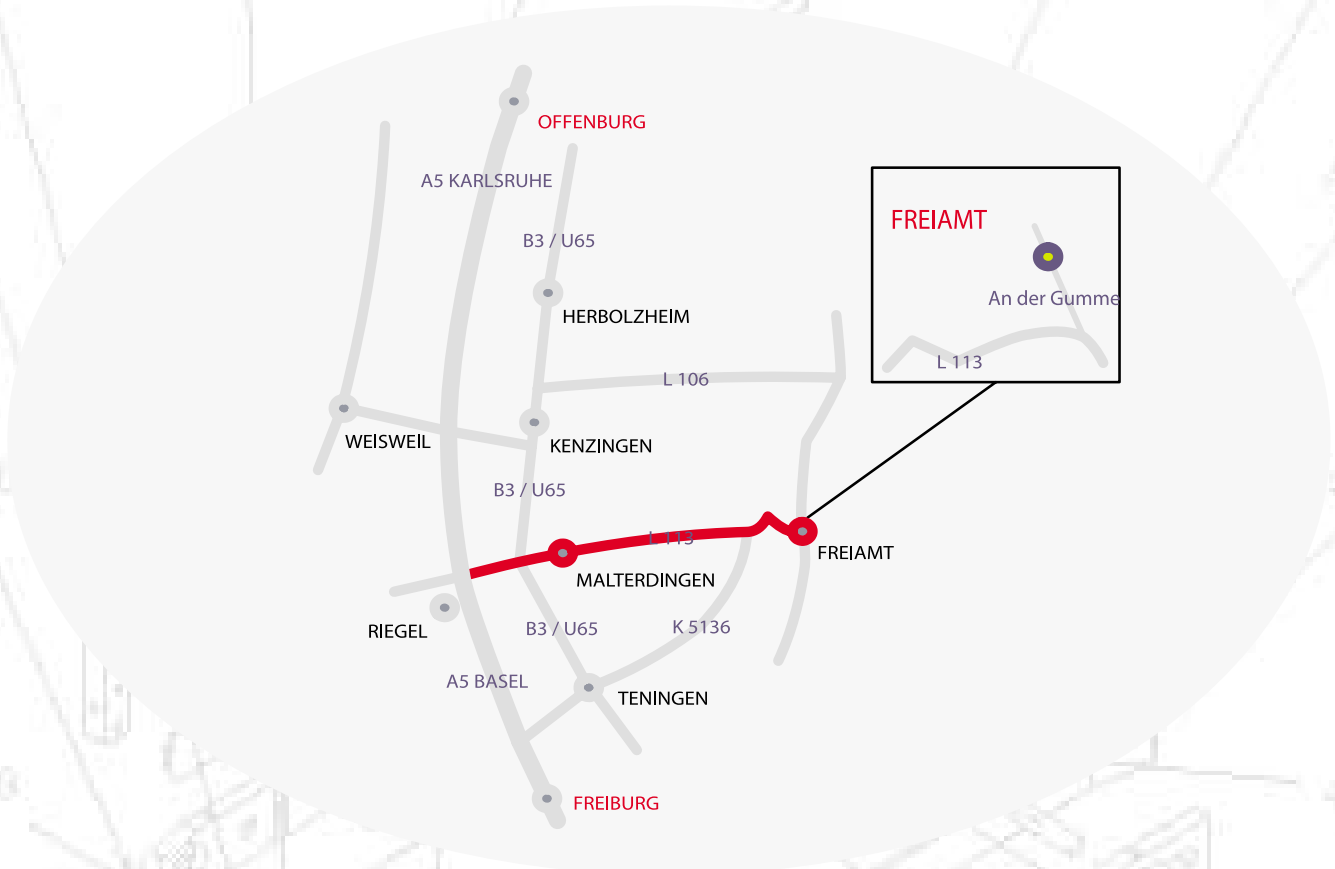

NOZZLES

offer convincing advantages for the rational use of tubular bag packings. High-strength synthetics for a permanent contamination-free use.

The especially developed **PISTONS** with an extendable displacement head prevent film jamming and guarantee an excellent residual discharge

WE'RE LOOKING FORWARD TO SEE YOU

DIRECTION:

- Motorway A5 (BAB 5) in direction of Basel
- Exit Riegel - keep left in the direction of Freiamt
- Turn right at the first possible road (direction Freiamt)
- Pass through the town of Malterdingen - direction Freiamt
- Start of the town of Freiamt, straight on - pass the bus turning area (left side)
- Turn next (after 500 m) at the next possible road "An der Gumme"
